## FEATURES

Gun Metal	The Gun Metal finish is obtained by treating steel with a physical process called PVD (Physical Vacuum Deposition) which deposits particles of noble metals on the surface. The result is a unique and refined aesthetic effect, and an improvement of the mechanical properties of the steel which is more resistant to impact and scratches.
Deep bowls	This bowls reach an important depth, over 20 cm, thanks to the advanced production technology, that can be offer great capieny and practicity in all the washing operations.
High thickness	1mm thick steel. A significant thickness, which guarantees the maximum sturdiness and durability.
Perimetral overflow	The overflow is always a security on the Foster sinks that prevents the overflow of water in case of oversights. The perimeter drain solution improves aesthetics thanks to its square and essential shape.
Save space system	Drain and siphon are designed to leave as much space as possible in the under-sink area, more and more useful today for theseparate waste collection systems.
Small radius	Bowls with squared shapes with a modern design and an increased capacity, for a minimal aesthetics connected with an extreme practicity.

## Space waste fitting

The elegant SPACE steel cap closes the drain and leaves no visible residues collected in the basket below. Space also has a small footprint and allows the optimal use of the under-sink compartment.
